DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: on pg 14, ln 10-12, refers to the claim for disclosing the "switching mechanism", it appears that the Detailed Description should be more specifically disclosing the claimed invention.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Ishimaru (5018346).

cl. 1: traveling body, mowing mechanism (fig 1, ref 10); collection box (container 12) pivotally connected (at pivotal pins 23); manual operation member (fig 7, handle 33); interlock mechanism (connector 32) includes switching mechanism (pivotal pins 23);

cl. 2: the interlock mechanism includes an arm link (connector 32), point at which operation force of the manual operation member is applied is moved by the switching mechanism (as the operator applies manual force the point moves due to the switching mechanism, compare fig 7 & 4);

cl. 3-4: support frame & support bottom plate (30 & support bottom plate shown in fig 15) & net/cloth (fig 3, side view shows a net/cloth), the support plate connected to the support frame

(the upper frame member) via a spring/elastic buffer (the right side of the container is spring like resists against pivotal movement of the plate, in other words the right side of the container acts elastically & resist against downward movement).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See form 892.
